

**New Celviano digital piano entry-level models
with top-class sound technology**

AP-300

AP-S200

NORDERSTEDT, 5 September 2024 - CASIO is launching two new entry-level models in the successful CELVIANO digital piano series. Firstly, the AP-300 with its classic cabinet design and the AP-S200, which is characterized by a slim, lightweight profile. Both models offer technology elements from CASIO's top-of-the-range digital pianos and the opportunity to experience the authentic touch behavior of the keys and the realistic sound reproduction of a grand piano in combination with an elegant case design.

Under the motto 'Sound for Style', CASIO has set itself the task of creating unique musical instruments that enable music to be played, experienced and enjoyed, while at the same time recognizing and promoting individual lifestyles and cultural diversity. The CELVIANO series is an example of this approach, combining the timeless elegance and craftsmanship of traditional piano making with cutting-edge modern technology to offer a new and innovative piano experience.

The brand-new AP-300 and AP-S200 models are based on the unique acoustic design of the Celviano top models, which ensures extremely natural sound unfolding and impressively reproduces the complex resonance behavior of a grand piano.

Both models are equipped with the Smart Scaled Hammer Action keyboard, which enables the finest nuances in musical expression thanks to its high touch sensitivity.

Elegant visual details, such as the golden logo on the keyboard cover of the AP-300, exude a touch of elegance and sophistication. The AP-S200, on the other hand, is incredibly slim with a depth of just 299 mm, is light and subtle and can be effortlessly integrated into any living room without taking up too much space - perfect for everyday piano playing.

In addition, both models are equipped with the WU-BT10 Wireless MIDI & Audio Adapter, which enables a Bluetooth® connection for use with smart devices. With the CASIO MUSIC SPACE app, selecting tones and editing settings is even more convenient, and it is also possible to play and listen to your favourite music via the piano's internal speaker system.
